

Clarity™ Aesthetic Braces are the clear alternative to metal braces. An attractive translucent appearance and comfortable design gives you all the self-confidence you need to face each day with a smile.

You'll be noticed but your braces won't.

You'll feel better about yourself knowing that the natural beauty of your teeth is shining through, and not your braces.

And, Clarity braces won't stain or discolor.

They'll look as good the day they come off as they did the day your orthodontist put them on.

Ask your orthodontist about Clarity braces.

Find out how you can have a smile that everyone will notice.

CLARITY™

Aesthetic Braces

They'll notice everything
but your braces.

Important Consumer Information Clarity Ceramic Braces

Clarity Ceramic Braces may be used whenever metal braces are appropriate for treatment. Consult an orthodontist or qualified dental practitioner to evaluate your orthodontic needs. Clarity ceramic braces should be placed and removed only by a qualified professional following the manufacturer's guidelines.

It is important to always follow your orthodontist's instructions for use and care of your braces to promote successful treatment and to avoid damage to either braces or tooth enamel.

Warning: The inner portion of Clarity ceramic braces contains nickel and chromium. A small number of people are known to be allergic to these metals. Inform your orthodontist prior to treatment if you have known allergies. Consult a physician immediately if an allergic reaction occurs or is suspected.
